Nutrition Tips

For Women Who Breastfeed After Having Gestational Diabetes

“When I was pregnant, I had gestational diabetes. I decided I was going to breastfeed my baby. Breastfeeding is the best thing for both of us.”

Look inside for information on nutrition and breastfeeding!

Breastfeeding is good for you and your baby. Your breastmilk is the best food for your baby. Your baby will not get diabetes from your breastmilk. Breastmilk helps prevent your baby from having diabetes later in life. **The longer you breastfeed the better it is for you and your baby. Breastfeed for at least one year.**

Women who had gestational diabetes are more likely to get diabetes in the future. To help prevent or lower your risk of getting diabetes: eat right, stay at a healthy weight, stick to an exercise routine, and breastfeed.

Here are some tips to help you breastfeed:

- 1 Breastfeed your baby often (at least eight to twelve times each day). This will help you **make more milk**.
- 2 Try to drink water each time you breastfeed.
- 3 Continue to follow the meal plan you got when you were pregnant.
- 4 Eat three small meals **and** three or more healthy snacks every day.
- 5 Limit the amount of fats you eat each day. Some examples of fats are:
 - ❖ butter
 - ❖ oil
 - ❖ salad dressing
 - ❖ bacon
 - ❖ sour cream
 - ❖ mayonnaise

- 6 Limit the amount you drink of the following:
 - ❖ alcohol
 - ❖ coffee
 - ❖ tea
 - ❖ other caffeinated drinks
- 7 Eat high fiber foods. Some examples of high fiber foods are:
 - ❖ vegetables
 - ❖ whole grains
 - ❖ beans
- 8 Being overweight increases your risk of getting diabetes. Get to a weight that is best for your height. Lose weight slowly. Try to lose between 1 and 4 1/2 pounds a month. Talk to your health care team about healthy ways to lose weight. Try the following:
 - ❖ Set a weight goal. Break your main goal into smaller “mini” goals. For example, you may want to lose a total of 30 pounds. Your first “mini” goal might be to lose 3 pounds this month.
 - ❖ Do not use diet pills.
 - ❖ Talk with a registered dietitian to help you plan a healthy diet.
- 9 Ask your health care team if you need to take any vitamin or mineral pills.
- 10 Plan an exercise routine. Walking is a good choice.
